KRISHNA M S

IT OPERATIONS & CYBERSECURITY LEADER

+91 98801 55055 | krishna.ms@gmail.com | Bengaluru, Karnataka, India | https://linkedin.com/in/krishnams

EXECUTIVE PROFILE

IT and Cybersecurity leader with 25+ years of experience across global IT operations, enterprise infrastructure, cloud modernization, security governance and business continuity. Led IT services for approximately 170 employees across seven locations with a seven-member team. Combines operational leadership and cost optimization with risk governance and ISO/IEC 27001:2022 certification delivery to strengthen resilience, control and business readiness.

CORE COMPETENCIES

IT Operations & Service Management: IT Operations • IT Service Delivery • ITIL • Infrastructure Management • Service Availability • Helpdesk Management • IT Governance • Business Continuity • Disaster Recovery

Cloud & Infrastructure: AWS • Azure • Microsoft 365 • Cloud Infrastructure • Server Administration • Network Administration • Virtualization • Enterprise Infrastructure • Systems Administration

Technology Management: IT Strategy • Technology Transformation • IT Procurement • Vendor Management • Contract Management • Budget Management • Cost Optimization • Stakeholder Management

Operational Governance & Risk: ISO/IEC 27001:2022 • ISMS • NIST CSF • GRC • Risk Management • Compliance Management • IT Audits • Third-Party Risk Management • Business Resilience

Cybersecurity: Security Operations • Vulnerability Management • Incident Response • SIEM (ELK Stack) • EDR/XDR • Identity & Access Management • Microsoft 365 Security • Email Security • Security Awareness

Enterprise Platforms & Collaboration: Microsoft Entra ID • Conditional Access • Intune/MDM • SentinelOne • ManageEngine Patch Manager • Acunetix • Mimecast • GLPI • Zoom • Atlassian Confluence/Jira • Slack

PROFESSIONAL EXPERIENCE

TORADEX SYSTEMS INDIA PVT. LTD. | Head of IT | Sep 2013 – Dec 2025

1. IT LEADERSHIP & GLOBAL OPERATIONS

- **Global IT operations and team leadership — Led IT operations for approximately 170 employees across seven locations with a seven-member team. Coordinated direct and locally managed resources and cross-trained staff, broadening team capability and supporting consistent service coverage across locations.**
- IT budget, procurement and vendors — Directed annual IT budget planning, procurement, hardware/software renewals, vendor negotiations and service-performance reviews, aligning technology spend with operational needs while reinforcing cost discipline and supplier accountability.

2. INFRASTRUCTURE, CLOUD & NETWORK MODERNIZATION

- Hybrid infrastructure and cost optimization — Modernized fragmented infrastructure and legacy systems across on-premises, private cloud, OVH, AWS and Azure by consolidating legacy systems and optimizing AWS resources; reduced AWS compute costs by 10% and overall IT operating costs by 15%, while maintaining availability above 99.5%. OVH-to-AWS migration and legacy retirement planning remained in progress at departure.
- Network modernization — Replaced fragmented D-Link and other third-party network equipment with Ubiquiti networking/Wi-Fi and Cisco 5500/3500-series switches, enhancing network visibility, reliability and day-to-day administration. Cisco and Ubiquiti remained managed through separate platforms.
- **Telephony migration —** Simplified administration of third-party telephony by migrating 50 users to Zoom Phone, completing the transition with zero downtime.

3. CYBERSECURITY ENGINEERING & OPERATIONS

- Identity and access security — Closed gaps in modern access controls by deploying MFA and SSO and introducing privileged-access controls, alongside Microsoft Entra ID Conditional Access and Microsoft Intune device management, enhancing authentication, access governance and device control.
- Endpoint protection — Enhanced malware and ransomware protection by deploying SentinelOne endpoint protection and detection and response capabilities, maintaining greater than 95% agent-version compliance on systems covered by the solution.
- Patch management — Reduced reliance on manual patching by deploying ManageEngine Patch Manager for operating-system and third-party application updates across Windows endpoints, Windows servers and Mac endpoints, creating a more centralized patching process and providing clearer visibility into patch compliance.
- **Security monitoring and incident investigation — Addressed limited centralized visibility into security events by evaluating and implementing the free version of ELK Stack SIEM for security-log collection and correlation, giving the IT team a more consolidated basis for investigating and responding to security events.**
- Email security — Mitigated email spoofing and impersonation risks by correcting SPF, DKIM and DMARC configurations and implementing Mimecast, strengthening sender authentication and email-filtering controls without relying on unverified phishing-reduction claims.
- Website vulnerability management — Instituted quarterly Acunetix scans of the primary corporate website and partnered with the web team on findings and remediation, maintaining a recurring process to identify and address website vulnerabilities.

4. ISMS, RISK & COMPLIANCE GOVERNANCE

- ISO/IEC 27001:2022 certification — Led the head-office certification journey from September 2024 to July 2025 to strengthen organizational credibility and competitiveness and support business growth and revenue opportunities. Aligned teams and established ISMS governance, risk-management practices and security controls, achieving certification with zero major and zero minor audit findings.
- Enterprise risk governance — Formalized risk tracking and ownership across five global business units through risk registers, assigned risk owners, remediation tracking and regular leadership reviews, improving leadership visibility and accountability for risk treatment.
- **Third-party compliance — Implemented ISMS Online to track compliance documentation for 20+ vendors against ISO/IEC 27001, SOC 2 and GDPR requirements, making vendor evidence easier to maintain and review through a more structured process.**
- **Security awareness — Established recurring awareness activities and phishing simulations to address phishing and social-engineering risks, achieving 100% employee coverage and tracking simulation performance as an ISO/IEC 27001 KPI.**

5. IT SERVICE DELIVERY & BUSINESS CONTINUITY

- Incident and change governance — Standardized incident handling and infrastructure-change documentation by rolling out GLPI Incident Management in 2019 and Change Management in 2024 for IT servers and equipment, creating more consistent incident tracking and documented change control.
- Backup and recovery preparedness — Maintained backup policies and recovery procedures and oversaw recovery planning across three OVH locations, documenting recovery approaches and strengthening preparedness for infrastructure failures or service interruptions.

EARLIER EXPERIENCE

STOKE NETWORKS PVT. LTD. | Senior Manager – IT | Feb 2010 – Oct 2012

- Planned and led the relocation of 10+ server racks during an office move, maintaining business continuity with zero downtime.
- Oversaw IT infrastructure and service delivery for 180+ users across India and the US with limited resources; evaluated and implemented a backup solution, strengthening data-protection coverage and recovery preparedness.

YODLEE INC. | IT Manager | Jun 2007 – Feb 2010

- **Standardized service management for 300+ users by introducing ITIL-based Incident and Change Management through LiveTime, creating structured incident tracking and change control for more consistent service delivery.**
- Strengthened business continuity and disaster recovery readiness through quarterly DR reviews, documented recovery procedures and clearly assigned recovery responsibilities, reducing potential recovery time by 30%.

GLOBAL EDGE SOFTWARE PVT. LTD. | Manager – Network & System Administration | Jan 2005 – Jun 2007

- Responded to IT budget constraints by evaluating and adopting five or more open-source solutions as cost-effective alternatives to commercial software, reducing IT operating costs by more than 10%.
- **Drove ISO 27001 implementation as Management Representative, coordinating the introduction of required security controls; also supported ISO 9001 recertification and CMM Level 5 activities.**
